

# Connecting Cancer Data to Clinical Outcomes Intelligence

# Prof David Forman Lead on Information and Analysis NCIN

Core Objective #3:

Producing expert analyses, based on robust methodologies, to monitor patterns of cancer care

#### **NCIN** core objectives

- Promoting efficient and effective data collection throughout the cancer journey
- Providing a common national repository for cancer datasets
- Producing expert analyses, based on robust methodologies, to monitor patterns of cancer care
- Exploiting information to drive improvements in standards of cancer care and clinical outcomes
- Enabling use of cancer information to support audit and research programmes

#### **NCIN** core objectives

- Promoting efficient and effective data collection throughout the cancer journey
- Providing a common national repository for cancer datasets
- Producing expert analyses, based on robust methodologies, to monitor patterns of cancer care
- Exploiting information to drive improvements in standards of cancer care and clinical outcomes
- Enabling use of cancer information to support audit and research programmes

Trends in one year cancer survival, England, 1985-2004

#### Year one outputs-examples

- A national Cancer E-Atlas providing the most recent incidence, mortality and survival figures by locality (in collaboration with UKACR and APHO)
- An electronic toolkit, bringing together information on cancer to enable the benchmarking of services and to inform commissioning (in collaboration with the Cancer Action Team)
- A national analysis of cancer incidence and mortality by deprivation
- An estimation of the number of cancer survivors (in collaboration with Macmillan Cancer Support and Thames CR)
- Reports on cancer incidence in relation to ethnicity and among teenagers and young adults (in collaboration with Cancer Research UK and NWCIS)
- An evaluation of the potential for following up patients who have been in clinical trials over long periods (in collaboration with the NCRN)

## Publication policy

- Analyses of topics not previously available (e.g. ethnicity, prevalence, trial demographics)
- Avoid duplication of existing outputs (e.g. CRUK Statistics)
- User friendly and readily accessible
- Professional and public dissemination
- Collaborative basis
- Encourage employment of state of art methodologies for analysis
- Ambition for full UK coverage

in England, the Guardian has learned.

The move will expose alarming variations in the mortality rates of NHS trusts carrying out commonplace procedures, including hip and knee replacements and surgery of the oesophagus and abdominal aorta, the main blood vessel.

It will be the first time anywhere in the world that a surgery of the comment has the control of the comment of the control of the

in the world that a government has systematically exposed the work of rival hospital teams, giving patients an opportunity to choose to be treated where opportunity to choose to be their lives are least at risk.

The data, which is to be put up on the NHS Choices website during the summer,

NIS CROICES website during the summer, is expected to reveal a disproportionately high death rate in hospitals carrying out fewer operations, where the surgeons have less opportunity to hone their skills. Ministers think publication of the figures will drive up standards by forcing trusts to improve performance or withdraw from medical specialties at which they do not excel.

or withdraw from medical specialities at which they do not excel.

At this stage the published data will give results for hospiral units, not individual surgeons. But Ben Bradshaw, the health minister, has instructed that the NHS Choices website should eventually let patients compare the performance of patients compare the performance of patients compare the performance of patients with the patients of the pati

in favour of the patient. Until recently surgeons resisted the disclosure of mortality rates, arguing that it might discourage them from taking on riskier cases and lead to the loss of lives among patients who could have benefited from treatment.

Trom treatment.
The surgeons also disputed the accuracy
of "hospital episode statistics" submitted
by trusts to the Department of Health.
But ministers were impressed by a
pioneering experiment by the Society
of Cardiothoracic Surgeons, which pub-lished the mortality rates of consultants
carrying out heart branes constitutes.

carrying out heart bypass operations.
Since the data was made available two

Sir Bruce Keogh, a heart surgeon and Sir Bruce Keogh, a heart surgeon and former president of the society, was recently appointed medical director of the NHS with responsibility for introducing openness to other branches of medicine.

At a private seminar at the Royal College of Surgeons on Tuesday he made it clear that ministers were no longer prepared to put up with excuses for continued medical secrecy. "There is no going back," he warned representatives of the medical colleges. "The department is not seeking your permission. It is merely seeking your help."

batch of mortality data would be published "within weeks or months" – at the latest

Disclosure of the mortality data of hospitals will be followed by the public-ation of a wider range of indicators showing the outcome of treatments across

many branches of medicine.

Keogh has asked the medical directors of every hospital and mental health trust in England to send in examples of the performance statistics they use internally to assess the quality of their clinical teams. The department will select about 50 for

ebate within the medical community.

Once any statistical snags have been ironed out, they will be published on the NHS Choices website, probably during the

spring of next year.

Keogh said the desire for openness Keogh said the desire for openness was being driven by three imperatives for the next stage of NHS reform: health commissioners need better data on the quality of hospitals' performance; doctors need to demonstrate the quality of their work; and patients need information about quality to exercise choice about where to go for treatment.

"We hope to identify a series of Ministers believe the publication of the death rate figures of hospitals will drive up standards in NHS trusts in England Photograph; Science Photo Library

Blair's former chief fundraiser, or become insolvent. A further £6.2m will have to be repaid by Christmas — making £13.6m in all. The sum amounts to two-thirds of the party's annual income from donations.

The figures are a conservative estimate

as they do not include interest that will also have to be paid. A Labour source said that although the total debt was listed as £17.8m on the Electoral Commission website, the true level, with interest, was nearer to £24m.

The possibility that party officials and

members of its national executive com-mittee could become liable is being taken seriously by union leaders, and has been

seriously by union leaders, and has been undefined by the decision of equity fund chairman David Pitt Watson not to accept the post as Labour's general secretary.

Though he was Brown's candidate receiving independent legal advice that he would be personally liable for repaying the loans and could be bankrupted if Labour's finances collarsed. Labour's finances collapsed.

The advice from City solicitors Slaugh-ter and May said unequivocally that lead-ing party officials and members of the NEC would be "jointly and severally" respon-sible for the party's debt. The reason is that the Labour party

constitution is framed like a local club or society, and has no provision for limiting the liability of its officials or managers. A Labour source said: "The party's con-stitution is like a five-a-side football club, or the local cricket club. The big difference

orthe local cricket club. The big difference is that the most club officials and managers could expect to have to fork out is an unpaid bill for hings the pitch, in Labour's case, it's tens of millions of pounds. The advice was the sole reason why provided the pitch of the pitc

have been enormous. Earlier this month the GMB union's executive decided to

# Unacceptable variation in abdominoperineal excision rates for rectal cancer: time to intervene?

E Morris, 1,2 P Quirke, 2 J D Thomas, 1,2 L Fairley, 4 B Cottier, 3 D Forman 1,4

Using information to improve quality & choice

# Colorectal cancer intelligence work programme

- Post-operative mortality
- Variation in consultant workload
- Survival in relation to ethnicity
- Impact of PELICAN surgical training
- Hepatic resection for metastases
- Follow-up of RCTs
- Impact of screening programme
- Outpatient attendance patterns
- Linkage with genetic datasets
- Linkage with GPRD
- International care comparisons Netherlands and France

#### Supported by NYCRIS & Cancer Research UK

Bobby Moore Fund Career Development Award

#### Lead areas for cancer registries:

- Lung Thames
- Breast WMCIU
- Colorectal NYCRIS
- Urology SWCIS
- CNS ECRIC
- Gynae Trent
- Head &Neck Oxford
- TYAC NWCIS

- Skin SWCIS
- Upper GI Thames
- Sarcoma WMCIU
- Haematol NYCRIS
- Children CCRG

To be supported by National Clinical Reference Groups

#### Site-specific analyses, at population level, to:

- monitor service delivery and clinical interventions which impact on patient outcomes and/or quality of life
- monitor uptake and demographics of new interventions
- supplement and extend information from clinical trials
- analyse demographics of relatively rare procedures

#### **Dependency on:**

- detailed flow of information on stage of disease, comorbidity, RT and CT
- receipt of information in timely manner (close to real time)

- Data will be more extensive and more complete than ever previously available
- But based on routine NHS sources not specifically collected for audit/outcomes research
- There will be inaccuracies and data errors
- Case-mix adjustment will be inadequate
- How do we present results professionally and in public domain?

- Work with PIAG, Information Centre, NHS Choices, Cancer Networks to maximise open publication of results
- Identification of Trusts and clinicians should become the 'norm'
- Maintain clinician 'buy-in' advance warning and no surprises
- Importance of robust methodologies and mix of peer review publication and routine reports

#### Future perspectives:

- Massive potential of data linkages:
  - Service: clinical, primary care, end of life
  - Research: genetic, trials, informatics
- Scope to transform information landscape
  - New linked datasets as research tools
  - Clinical care and outcomes properly monitored for service improvement and patient benefit
